

CONVERTING METHANE POWERED ACTUATORS TO ZERO-EMITTING TECHNOLOGY

Reducing methane releases to atmosphere will continue to be a contentious topic, regardless of who sits in the White House. The issue is real, and so is the solution by Hybrid Automation.

- This is a closed loop air transfer system, zero venting to atmosphere.
- Existing pneumatic actuators and valves remain intact.
- Provides tangible, lasting results to achieve ESG goals; zero emissions.
- Addresses Biden E.O. 13990 for fugitive emissions/methane mitigation.
- On/Off and modulating control system compatible.

Reinventing Technology for Methane Venting Mitigation
